

I am prathisha from Namakkal. Namakkal is famous for trolley production. Egg production. Currently I am pursuing my Engineering degree at Kongu Engineering college, Perundurai. I completed my schoolings at Sri Vani matric Hr. sec. school. I secured 91% in my 12th grade. I am from a family of four. My father Sadasivam, he is a Farmer. My mother Malathi, she is a homemaker. My elder brother Ashwin, he is working as a web designer. My area of specialisation is web development. I have interest in cloud computing. I had attended Inplant training for web development and workshops on Digital Marketing. My hobbies are Gardening and watching Movies. I can easily adapt to the new environment. I consider it as my greatest strength. My weakness is I give less preference to the things when I have more work to do. Nowadays I am changing those things into positive one. My short term goal is to get placed in a reputed company like yours. My long term goal is to go higher position in your company.

2. As a fresher, I bring a lot to the table in terms of skill and ability. I am flexible and adaptive to learning new things, which means I will be able to contribute something to the growth of the company. I am capable to work as a team. Additionally, I always play by the rules and follow the company guidelines, so you can be confident that I will always be acting in the best interest of the business. All of these factors combined to make me confident that I will be a valuable asset to your team.

3. My strength are I can easily adopt to new environment and maintain a optimistic outlook even in the difficult situations. My weakness is that I am not able to prioritize my task while dealing with multiple task. Currently I am working on it to get my tasks done in the most efficient way.

4. The technical skills or tools that I am proficient in are programming, front end development ⁵
5. The new engineering skill that I have recently developed are programming skill and cloud computing.
6. During first year of my Bachelor's degree, I was expected to collaborate on group projects. I am very organised and had to work on a significant project with another student who was disorganized and disinterested. I created interest to motivate my classmate to work efficiently. We worked together for that project and gave the best outcome.
7. Yes, I had faced a situation where I have to meet tight deadlines. I prioritize tasks, stay focused and maintain a clear, calm mindset. Breaking down the problem into smaller steps and addressing them systematically helps. Effective time management and open communication are the key to manage pressure and delivering results efficiently.

8. I can stay updated with technology trends⁶ by following reputable technology news sources, subscribing to industry newsletters, attending webinars and conferences, participating in online communities and engaging in continuous learning and skill development.

9. My greatest strength as an Engineering student is problem solving skills

10. The drastic growth of the technology and we the engineers get adopted to the evolving technology I would be staying updated with the evolving technology by following company newsletters and reputable technology and news sources.

11. I can stay updated in my field by participating in online communities and engaging in continuous learning and skill development.

12. I prioritize my work and manage my time efficiently by setting clear goals, making a list and categorizing tasks by urgency and importance. I use time blocking, set deadlines, eliminate

distractions , take breaks , review and adjust plans regularly , delegate when possible , and utilize productivity tools and apps .

13. I would consider that I am getting adopted to a new environment very quickly so I consider that as my most valuable soft skill .
14. I would handle feedback and criticism in the beneficial way . If any feedback and criticism really grow me . I will take that into consideration and develop .
15. I would be in the position where my knowledge and skills are utilized to the maximum .
16. My objective is to continuously grow and achieve personal and professional success through dedication , learning and meaningful impact .
17. I will prefer to work in the environment where I am comfortable . I would like to work in a calm and composed environment .

18. Hardwork is something that takes manual efforts and the work will not be done easily whereas smartwork is that which does need manual efforts just be sensing something the work can be done easily.

19. The three things that I consider^a most important for my job are technical skills , communicating skills and not distracting from the work.

20. The most challenging decision that I have ever made is choosing Engineering
